Re: Offset Equivalency Report, August 2017 – August 2018

Dear Ms. Adams:

As required by the District's New Source Review Rule, the District has completed an annual offset equivalency report for the twelve-month period from August 20, 2017 to August 19, 2018. The attached report incorporates the following (Attachment A):

- The quantity of offsets that would have been required from new major sources and major modifications to existing sources under a federal NSR program,
- The quantity of offsets actually required by the District,
- The surplus-at-time-of-use value of the emission reductions used to offset emissions increases from stationary sources, and
- The quantity of shortfall or excess carry-over credits.

As you can see from the attached report, the District required more offsets than would have been required under federal offset requirements, and the surplus value of the reductions used exceeded those required under federal NSR. Although allowable, it was not necessary this year to count as surplus the use of Emission Reduction Credits as offsets for new and modified stationary sources which are quantified and accounted for as growth in the District's attainment plans. Equivalency is demonstrated and no remedial actions are necessary.

For your information, there were thirty-eight (38) projects of interest during this reporting period, as detailed in the attached List of Projects of Interest (Attachment B). Thirty-seven (37) of these projects are included in this report as trackable projects, and the remaining one project (Land O' Lakes) is not included in the tracking system, as detailed in Attachment B.
