M. 8-Hour Ozone Standard (>70 ppb)	32	17	14	19	17	18

- In this table, ppb stands for parts per billion and µg/m³ stands for micrograms per cubic meter.
- Number of Unhealthy AQI county-days, PM2.5 exceedances, and/or PM10 exceedances referenced in the table above reflect periods influenced by meteorological stagnation and regional smoke impacts. Final regulatory determinations regarding Exceptional Event applicability have not been made. Data may be evaluated for Exceptional Event consideration, as appropriate (e.g., wildland fires, windblown dust).
- “County-Days” is the 8-county total of the number of days recorded in each county in each AQI category. “Basin-Days” is the number of days that an air quality standard was exceeded anywhere in the San Joaquin Valley Air Basin. “County Days” is more representative of population exposure to air pollution than “Basin Days.”
- The PM2.5 data is based on EPA equivalent sampling methods and non-reference (real-time) methods. Because EPA reference methods require laboratory analysis, official counts for PM2.5 are generally not available until about three months after the sample date.
- This Valley table does not include data from Sequoia & Kings National Parks and Sequoia National Forest in Tulare County.
